veterinarian

# InuCardin

## For the natural support of the cardiovascular system.

Given the increased life expectancy of our pets, we are witnessing more typical signs of old age: tired and listless pets due to declining metabolic performance and decreased circulatory functionality. Living together becomes challenging due to changes in sleeping habits, increased disorientation, and even senile dementia. Many of these aging processes are caused by reduced elasticity of blood vessels and changes in the circulation of the blood. This is when InuCardin can ideally supplement the diet and help support the cardiovascular system. InuCardin in powder form is easy to mix into the food and administer. Perfect for dogs who refuse tablets. InuCardin contains no added flavorings, is suitable for allergy sufferers and can be given over a long period of time.

## Ingredients (excerpt)

### Ginkgo extract (*Ginkgo biloba*)

Ginkgo increases blood flow and supports brain metabolism, making it commonly used in treating a wide variety of age-related ailments in humans and animals alike.

### Green tea extract (*Camellia sinensis*)

The ingredients of green tea are considered to have a protective effect on the cardiovascular system.

### Hawthorn tincture (*Crataegus monogyna fructus et folium*)

Hawthorn tincture supports the heart's energy metabolism, including both flavonoids and procyanidins. Flavonoids are known to support cardiac metabolism, while procyanidins are known to influence the coronary flow. The extract has a positively inotropic effect.

### Taurine

Taurine helps keep the heart healthy and prevents heart problems that are caused by taurine deficiency.

### L-arginine

L-arginine is an amino acid that acts as a vasodilator for blood vessels, thereby lowering blood pressure.

### L-carnitine

L-carnitine is an amino acid compound that supports the cardiac muscle's energy use and efficiency.
