

O-max

Omega-3 algae oil from sustainable sources with a high content of DHA and EPA to satisfy the daily recommended dose of essential fatty acids.

O-max contains high concentrations of the forms of omega-3 fatty acids (DHA and EPA) that the body can use directly, ensuring their almost complete assimilation. It has been optimized in taste and is extremely well accepted by cats and dogs. One ton of algae oil replaces 60 tons of fish in the extraction of omega-3, making O-max a sustainable source of omega-3. The oil is produced from algae *Schizochytrium sp.* This algae is cultivated in special containers, which ensures that the marine ecosystem is not affected. Unlike fish oil, the algae is not exposed to pollutants.

Product type

Feed for cats, dogs, horses

Contents

30 / 100 / 300ml oil

Composition

Algae oil (from *Schizochytrium sp.*)

Analytical components

Crude ash (< 0.1%), crude fat (99.9%), omega-3 (at least 470mg/ml DHA +EPA, of which at least 94mg/ml EPA), omega-6 (approx. 5.0% – subject to minor natural variations), omega-9 (approx. 0.2%), iodine (< 0,00001% \pm < 0,094 μ g/ml)

Additives

Tocopherol extract derived from vegetable oils (1b306(i)) (maximum 1.5%)

Daily recommended dosage

	 
< 5kg	0,75ml ** – 1,0ml ***
5–10kg	1,0ml ** – 2,0ml ***
10–20kg	1,5ml ** – 3,0ml ***
20–30kg	2ml ** – 4,0ml ***
30–40kg	2,5ml ** – 5,0ml ***
	
je 100kg	1,5ml ** – 3,0ml ***

** to meet the demand for essential fatty acids

*** in case of increased demand

It is possible to increase the dosage after consulting your veterinarian (all animals).

Instructions

Orally administer the indicated amount of O-max using the enclosed syringe or mix it into the feed.

1. Attach the syringe to the bottle.
2. To fill the syringe, turn the bottle upside down.
3. To withdraw the syringe, turn the bottle back into the upright position.
4. Clean the bottle opening with a dry cloth before closing.
5. Rinse and dry the syringe before the next application! After application, do not transfer any leftovers from the dosing syringe back into the bottle. Avoid contact of the product with residual water in the syringe as this can have a negative effect on the quality of the product.

To be given with the main meal. Do not exceed the daily recommended total fat intake.

Dose O-max gradually when administering to sensitive animals. For all other species, consult your veterinarian and dose in strict compliance with the species-specific maximum total daily fat intake.

Minimum age for all species: Can be fed after the animal is no longer feeding on milk only and can eat on its own.

Shelf life and expiration information

Do not store unopened above 25°C.

After opening, keep stored in the carton package in the refrigerator to avoid light and use within three months.

Note

Do not use in cases of acute coagulation disorders or in combination with the use of anticoagulants. Discontinue use in the event of large wounds or prior to surgery.

Suspend use in case of diarrhea or stomach problems and recommence at a lower dosage.

Contains no animal ingredients.

Packaged in a protective atmosphere.
