

Respirax

No wheezing, no sneezing

With the Respirax Family, all your patients are well looked after. Mucus? Respirax increases the frequency of expectoration and prevents secretions from building up. For cats and dogs as a paste, and as pellets for horses. Both are available for rodents!

From now on
for every cold!

Only available at your
veterinary practice

To support the respiratory tract and enhance
the self-cleaning function of the lungs.

Respirax

To support the respiratory tract.

The herbal complex in Respirax is optimized for all patients – for cats and dogs as a paste, and as pellets for horses. Both are available for rodents! The ingredients are also tailored to the patients. All are designed to reliably support the patient's airways and increase the frequency of sputum production. With Respirax, you can provide your patients with optimum support with the following high-dose ingredients:

Respirax for rodents
Ribwort plantain, thyme

Respirax for cats
Ribwort plantain, Manuka honey, L-lysine, Coriolus versicolor, chaga, vitamin C, zinc

Respirax for dogs, rabbits and rodents
Ribwort plantain, thyme, Manuka honey, ivy

Respirax for horses
Ribwort plantain, thyme

Ingredients

Ribwort plantain (*Plantago lanceolata*)

The mucilage contained in ribwort plantain can form a protective layer on the mucous membranes of the respiratory tract. A variety of secondary plant compounds in ribwort plantain support the healthy functionality of the respiratory tract.

Thyme (*Thymus vulgaris herba*)

The mucylotic properties of thyme facilitate breathing and strengthen bronchial function. All plant components of the herb are used apart from the root.

Manuka honey (MGO 514+)

Manuka honey is extracted by honeybees from the South Sea myrtle (Manuka plant) in New Zealand, where it has been used for many generations. Respirax contains Manuka honey with a particularly high level of methylglyoxal (MGO 514+), a sugar breakdown product that is present in concentrations up to 100 times higher than in conventional honeys. Due to this special natural phenomenon and the associated antibacterial properties, Manuka honey is valued by experts worldwide.

Ivy (*Hedera helix*)

Ivy promotes the relaxation of bronchial muscles. Several secondary plant compounds found in ivy leaves, especially α-hederin, stimulate the bronchial mucosa to produce more viscous mucus that is easily discharged.

L-lysine

L-lysine is an essential amino acid that the body cannot produce itself. It helps strengthen the immune system and is important for a wide range of bodily functions.

Coriolus versicolor (*ground*)

This vital mushroom is used to fortify the entire organism. Furthermore, it can promote mucus expectoration. Thanks to the special manufacturing process, the shell-broken process, the bioavailability is improved.

Chaga (*ground*)

The medicinal mushroom chaga can strengthen the immune system and have an antioxidant effect. The special manufacturing process, the so-called shell-broken process, improves the bioavailability of Chaga.

Zinc and vitamin C

Zinc and vitamin C support the immune system. Vitamin C additionally acts as an antioxidant and promotes the bioavailability of the beneficial mushrooms.

Respirax for rodents

Product type
Supplementary feed for rodents and rabbits
Contents
60g pellets
Composition
Herbs (thyme, ribwort, chamomile), cold-pressed oil mixture (linseed, sunflower seeds, black cumin seeds, grape seeds, canola), yeast products (rich in RNA and nucleotides), corn germ, beet pulp, diastatic malt, flaxseed yellow cracked, dextrose, chicory inulin
Clinoptilolite sedimentary origin 1g568 (400mg)
Analytical components
Crude protein (10.2%), crude ash (8.7%), crude fiber (18.0%), crude fat (9.0%), calcium (0.7%), potassium (2.1%), magnesium (0.2%), sodium (0.1%), phosphorus (0.3%), starch content (4.0%), sugar (0.4%)

Daily recommended dosage
Respirax can be administered directly or mixed with the feed.
Maximum feeding duration 10-14 days. Not intended for permanent use.
