as spray

Providing wonderful care since 2012

South Sea Myrtle (Manuka Shrub)

## ManukaLind

**Supports skin regeneration.**  
**Contains Manuka honey and comfrey extracts.**

ManukaLind is made from high-grade Manuka honey (UMF 15+), comfrey root extract and essential oils. The honey's unique composition promotes skin regeneration and the comfrey extract has a comforting and positive effect on irritated skin. The natural essential oils enhance the honey's characteristics, act as an insect repellent and discourage the animals from licking the treated area.

### Ointment

The securely screwed-on nozzle makes it possible to get to hard-to-reach places such as the anal sac or the oral cavity. The ointment can be dispensed perfectly without squirting and sticking. The reusable nozzles are easy to clean and are a popular alternative for button cannula. They are also convenient for pet owners to handle and use.

### Spray

ManukaLind Spray is easy to apply and the innovative applicator even allows you to spray upside down, enabling access to difficult areas (between the pads, neck and belly).

## Ingredients (excerpt)

### Manuka honey (MGO 514+)

Manuka honey is derived by honey bees from the South Sea myrtle (Manuka bush) in New Zealand where it has been used for many generations. ManukaLind features Manuka honey with a particularly high level of methylglyoxal (MGO 514+), a sugar metabolite that is present in concentrations 100 times higher than in conventional honeys. Due to this unique natural phenomenon and the subsequent antibacterial properties, Manuka honey is highly acclaimed by experts worldwide.

### Comfrey extract (*Symphytum officinalis*)

Comfrey greatly enhances skin regeneration. The allantoin contained in the roots and herbs of comfrey has a positive effect on the cell growth of the skin. Comfrey root extract stimulates the circulation of the irritated skin and helps soothe the infected area.

### Essential oils

Essential oils generally have an unpleasant taste, which discourages pets from licking off the product. The essential oils also work as a repellent against flies, fleas and mosquitoes.
