

PROBIOPLUS

The new generation of probiotics
is more than just a probiotic: it's a
triplebiotic.

Probiotic

Prebiotic

Postbiotic

With Vitamin B12

Gastrointestinal disorders are common in dogs.

30% have experienced at least one at some point in their lives⁽¹⁾. Loose stools caused by acute and chronic diarrhea are caused by:

- Everyday stress
- Antibiotic treatments
- Dietary changes
- Infections
- Intestinal disorders such as IBD

PROBIOPLUS

This new-generation probiotic is much more than a probiotic: it's a **triplebiotic**.

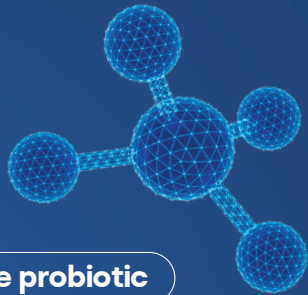

**work
synergistically**

Journal of the American Veterinary Medical Association, 262(12), 1676-1685. Retrieved Apr 16, 2025, from <https://doi.org/10.2460/javma.24.05.0358>.

What are the benefits of combining probiotics, prebiotics and postbiotics?

Combining these ingredients creates a virtuous circle that supports the maintenance, balance and protection of the microbiota all in one.

The probiotic

Calsporin® (*Bacillus velezensis*) provides beneficial live microorganisms that compete with pathogens, strengthen the intestinal barrier and modulate the immune system.

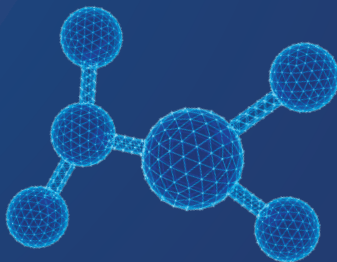

The prebiotic

is the food for this probiotic, ensuring its survival and helping it colonize the intestine.

The postbiotic

has immunomodulatory effects and helps maintain normal intestinal function by promoting epithelial renewal, even if the probiotic does not survive.

And what's more... it cont

Cobalamin deficiency can lead to various clinical and metabolic consequences, such as anorexia, weight loss, growth retardation, central and peripheral neuropathies, immunodeficiency and intestinal changes such as villous atrophy and malabsorption of other vitamins and nutrients.

The vitamin B12
in ProbioPlus

ains vitamin B12

Diarrhea can trigger a cobalamin (vitamin B12) deficiency due to reduced intestinal absorption.

Vitamin
B12

That is why supplementation is essential, which **ProbioPlus** provides.

Vitamin
B12

is essential for the proper functioning of intestinal cells. The dose of vitamin B12 in ProbioPlus is based on that used in a study of oral vitamin B12 supplementation in dogs with hypocobalaminemia.⁽²⁾

PROBIOPLUS

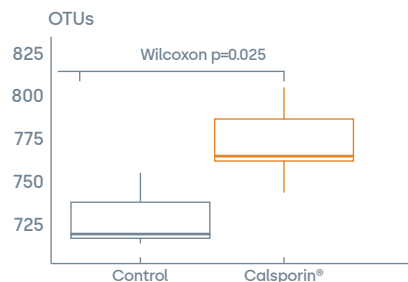

The triplebiotic

the scientifically supported triplebiotic that:

Helps stabilize the intestinal flora

(Study adapted from Lima et al., 2020)

Calsporin® enriched the gut microbiota and increased microbial diversity.

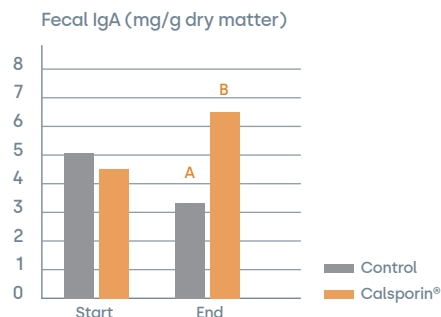

Richness of bacterial communities (number of OTUs per 12,804 reads) in dog feces ($p=0.025$). OTU = operational taxonomic units.

Promotes a strong immune system

(Study adapted from Dr. Balasz Capari, Hungary, Calsporin® EU registration dossier 2017)

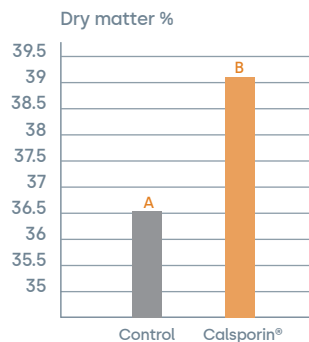

Calsporin® has the potential to benefit puppies by increasing IgA.

Improves stool consistency

(Study adapted from Felix et al., 2010)

The use of Calsporin® improves stool texture and odor in dogs.

ProbioPlus is highly palatable.

In an internal palatability study vs the main competitor, the results were very positive:

- *Similar first-choice preference to the main competitor*
- *Similar consumption to the main competitor*

*Helps stabilize
the intestinal flora.*

*Promotes a strong
immune system.*

*Improves
stool consistency.*

**Suitable
for all types
of dogs.**

**No cold
storage
required.**
